

# hanzo

Cutting-edge **crowdfunding** & **ecommerce**

featuring **STONED**

Building a business is **hard**.

Launching a new business demands mastery of **dozens of services and tools** and development of **time-consuming integrations and hours of customization**.

Yet without **solid fundamentals**, no business can succeed.

---

Launching a product is **hard**.

Real products need **significant capital** to develop and **traction** to achieve profitability.

Existing platforms are **inflexible** and **myopic**. If your **lack of traction** doesn't kill you, **technical debt** will.

---

Hanzo **solves** these problems.

# Meet Hanzo

Our *modular* dashboard has components which can be mixed-and-matched as needed to support everything from analytics to payment processing and customer support.

Hanzo comes **out of the box** with everything needed to **validate ideas, collect pre-orders, manage customer relationships** and **grow businesses**.

## Mission

Allow founders to **focus on products instead of infrastructure.**

# Our story

We've **raised \$15m in pre-orders** for early-stage hardware startups using **Hanzo**. Along the way we've developed unique solutions for analytics, customer support, marketing, payments, shipping and more. Since 2014 we've **invested \$1m** developing this IP.

We've **collected \$1.2m** in fees and contracts from startups which have used and loved our platform.

# Team

|                       |                |
|-----------------------|----------------|
| <b>Zach Kelling</b>   | CEO            |
| <b>Michael Walker</b> | VP Growth      |
| <b>Tim Messer</b>     | VP Operations  |
| <b>David Tai</b>      | VP Engineering |
| <b>Imran Hameed</b>   | VP Research    |

Collectively, we've built software which has been used by millions of people. We have **experience building and scaling platforms** for everything from advertising to business intelligence to ecommerce.

Together, we've built Hanzo and helped launch and power some of the **most successful crowdfunded companies of all-time**.

Together, we've **learned the hard way** what it takes to be successful in **hardware** and **software**.

# Early adopters

We launched **SKULLY's AR-1** in August 2014, raising **\$2.5m on Indiegogo** and **\$3.3m on Hanzo**. Our Indiegogo campaign became the **fastest to reach \$1m** and is still one of the highest funded of all time.

We launched **Bellabeat's LEAF** in May 2015. We collected **250k signups** and nearly **\$1m in pre-orders**.

We launched **KANO** in September 2015. We collected **50k pre-orders**, growing revenue to **\$1.5m/mo.**

We found early success with hardware companies, helping several grow from \$0 to millions of dollars per month in revenue.

# Batteries included

Hanzo has an API for just about everything a modern company will need:

- Analytics and advertising
- Forms and data collection
- Account creation and user management
- Payment processing and pre-orders
- Order management
- Inventory management
- Shipping and fulfillment
- Coupons and promotions
- Ambassador and referral programs

The screenshot displays the Hanzo API documentation interface. The top header is dark purple with the Hanzo logo, version 1.0, and the URL https://api.hanzo.io. On the right of the header are links for OAS, RAML, and Home. A sidebar on the left contains a search bar and a list of API sections: Account, Auth, Payment, Collection, Coupon, Form, Order, Product, Referral, Referrer, Site, and Shop. The 'Account' section is expanded, showing a list of endpoints: POST /account/create (selected), POST /account/login, GET /account, and PATCH /account. The main content area is titled 'Account' and shows the details for the 'POST /account/create' endpoint. It includes tabs for 'Definition' and 'Try it out'. Under 'Definition', there is a 'Headers' section with a table listing 'Accept' and 'Content-Type' as optional string headers. Below that is a 'Query String' section with a table listing 'token' as an optional string query parameter. At the bottom, the 'Request Body' is specified as 'application/json'.

# First-party integrations

Hanzo includes many high-quality, first-party integrations. All of our integrations are well maintained, tested and secure.

We're deeply integrated with the third-party services and platforms real companies need.

# Developer-friendly

Our early-adopters love our **developer-centric, data-driven ecommerce platform**. With a single line of code, founders have access to a beautiful, secure, and integrated system.

We've **open sourced 25 ecommerce libraries**, which enable deep analytic integrations, sophisticated marketing campaigns and beautiful shopping experiences.

**Shop.js**, our **reactive UI library**, powers everything from payments to referral programs and user portals.

**Checkout.js**, a drop-in checkout experience that we've heavily optimized for product launches and crowdfunding.

We believe so strongly in Hanzo that we use it to launch **our own companies**.

# Full-stack ecommerce

We use Hanzo to take companies from **pre-launch** to **pre-order** to **fulfillment**. We launched **Stoned Audio** late last year and within **60 days** and **with only \$20k** we acquired:

- **1.2k customers, \$135k sales**
- **70k+ social users** with great engagement
- **1.5k signups** via our referral program
- **100 ambassadors** for our ambassador program

...and **delivered our first hardware product.**

**Stoned Audio** was born out of a desire to make wireless earbuds that don't compromise on sound quality. This experience **informs everything we do.**

Launching our own hardware company has **honed our focus.**

# Nothing is faster

We were able to capture (and convert) early-adopter interest from day one and **deliver in months, not years.**

|          |      |                                              |
|----------|------|----------------------------------------------|
| October  | 2016 | Public launch, <b>first user signs up</b>    |
| November | 2016 | Batch 1 opens, <b>first order accepted</b>   |
| December | 2016 | <b>1k customers acquired</b> by mid-month    |
| January  | 2017 | Batch 2 opens, <b>first orders delivered</b> |
| February | 2017 | Customer <b>returns first product</b>        |
| March    | 2017 | <b>Next product launch</b> cycle begins      |

This is **hardware at the speed of software.**

| Page     |                                                                                                  | Total Page Likes                                                                           | From Last Week |

| 7        |  Nuheara      | 50.6K   | ▲6%            |

Hanzo enabled us to compete with much larger, more established brands and capture a significant amount of interest in only months.

# Business model, today

We collect **5% of all sales** made through our platform and directly manage advertising and marketing for almost all of our customers.

- Every launch we've managed has grossed **over \$100k in their first month**
- This is sustainable; many customers reach over **\$1m a month in revenue**
- The average length of time a company works with us is **18 months**
- Nearly every customer we work with elects to pay for our **design, engineering, and marketing**

# Business model, soon

**Launching self-service** is our next move.

Long-term, our integrated platform will allow us to sell a **variety of packages**.

- All self-service plans will include **recurring fees**
- Many of our existing APIs will become paid, with **granular pricing** based on usage
- We will continue to **eat our way up the stack**, developing features that **solve valuable problems**
- We will expand our managed offering by partnering with **elite hardware and startup accelerators**

The market for crowdfunding alone is huge: despite its limitations, **in 2015 over \$34 billion was raised** by early adopters.

And it's growing: The World Bank estimates that the crowdfunding market will reach **\$90 billion by 2020**.

# Competition

**Next up**

We want to make Hanzo **smarter** and  
**change the way companies are built.**

# Dash 2.0

We've learned a lot since we began work on Hanzo over two years ago. With Dash 2.0, **we're shooting for the stars.**

We've open-sourced **Daisho**, a library for building modular dashboards. Thanks to this, our new dash will even be **extensible by customers.**

And by popular request, completely themeable :)

Our new dashboard will enable businesses to build out infrastructure even more rapidly and with even greater customization than before.

# Command Bar

Introducing: **Command Bar**, our innovative solution for navigation, performing business tasks and business intelligence.

With it, customers will be able to **rapidly navigate** Hanzo, **automate repetitive tasks** and quickly **answer questions**.

Customers will even be able to add **new commands and functionality** to Hanzo, no UI designer required.

With the Command Bar, the full power of Hanzo is literally at your fingertips. With our extensible API, it can even get smarter.

# Expansion Plan

We require **\$1m USD** to prepare for public launch, build our community and make Hanzo accessible to a larger audience.

In 2017, we will:

- Open signups for our **public beta** and capture developer attention
- Acquire our first **1000 customers** and collect as much data as possible
- **Expand integrations** as necessary based on demand
- **Build community** around our ecosystem and tools
- Launch **Dash 2.0** and introduce **Command Bar**
- **Automate advertising and marketing** with user-friendly UI
- **Partner with hardware and startup accelerators** to drive deal flow

**Thank you!**
