

hanzo

Cutting-edge **crowdfunding** & **ecommerce**

featuring **STONED**

Building a business is **hard**.

Launching a new business demands mastery of **dozens of services and tools** and development of **time-consuming integrations and hours of customization**.

Yet without **solid fundamentals**, no business can succeed.

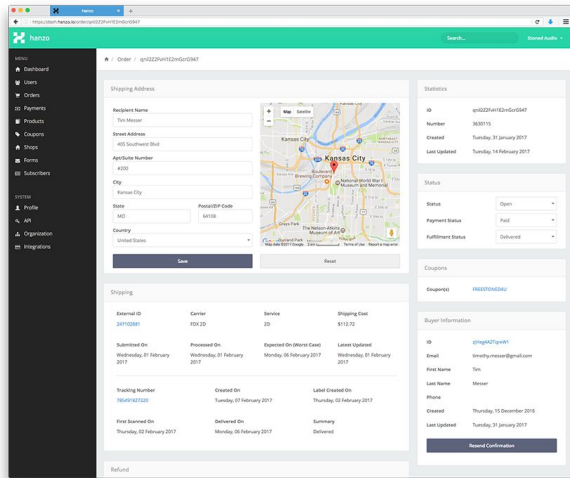

Launching a product is **hard**.

Real products need **significant capital** to develop and **traction** to achieve profitability.

Existing platforms are **inflexible** and **myopic**. If your **lack of traction** doesn't kill you, **technical debt** will.

Hanzo **solves** these problems.

Meet Hanzo

Our *modular* dashboard has components which can be mixed-and-matched as needed to support everything from analytics to payment processing and customer support.

Hanzo comes **out of the box** with everything needed to **validate ideas**, **collect pre-orders**, **manage customer relationships** and **grow businesses**.

Mission

Allow founders to **focus on products instead of infrastructure.**

Our story

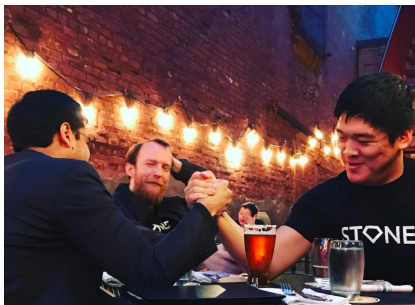

We've **raised \$15m in pre-orders** for early-stage hardware startups using **Hanzo**. Along the way we've developed unique solutions for analytics, customer support, marketing, payments, shipping and more. Since 2014 we've **invested \$1m** developing this IP.

We've **collected \$1.2m** in fees and contracts from startups which have used and loved our platform.

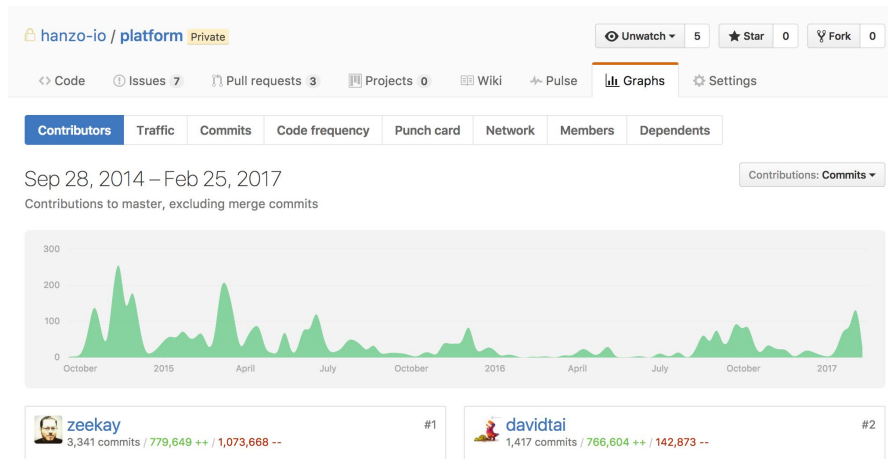

Team

Zach Kelling	CEO
Michael Walker	VP Growth
Tim Messer	VP Operations
David Tai	VP Engineering
Imran Hameed	VP Research

Collectively, we've built software which has been used by **millions of people**. We have experience **building and scaling platforms**.

Together, we've **learned the hard way** what it takes to be successful in **hardware** and **software**.

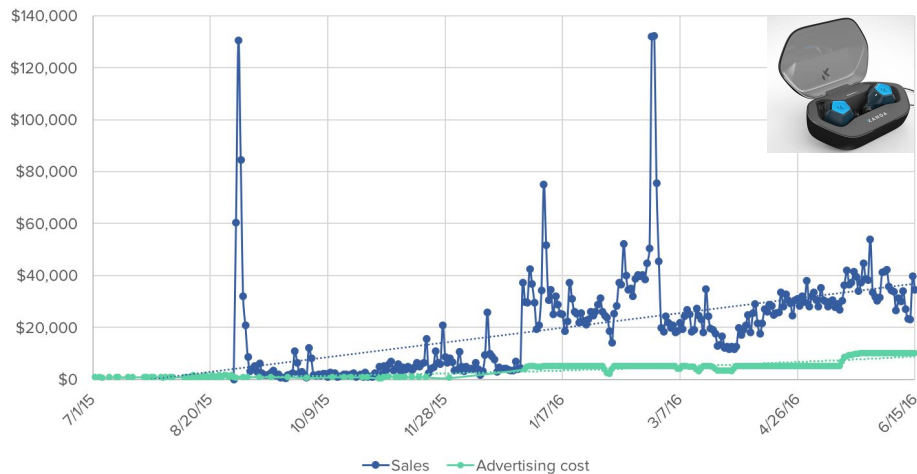

Early adopters

We launched **SKULLY's AR-1** in August 2014, raising **\$2.5m on Indiegogo** and **\$3.3m on Hanzo**. Our Indiegogo campaign became the **fastest to reach \$1m** and is still one of the highest funded of all time.

We launched **Bellabeat's LEAF** in May 2015. We collected **250k signups** and nearly **\$1m in pre-orders**.

We launched **KANO** in September 2015. We collected **50k pre-orders**, growing revenue to **\$1.5m/mo.**

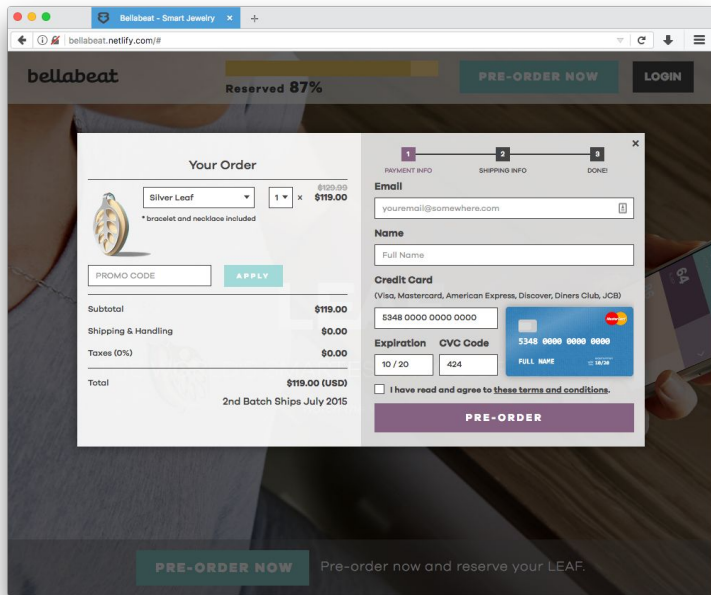

We found early success with hardware companies, helping several grow from \$0 to millions of dollars per month in revenue.

Developer-friendly

Early-adopters love our **developer-centric, data-driven ecommerce platform**. With a single line of code, founders have access to a beautiful, secure, and integrated system.

We've **open sourced 25 ecommerce libraries**, which enable deep analytic integrations, sophisticated marketing campaigns, and beautiful shopping experiences.

Shop.js, our **reactive UI library**, powers everything from payments to referral programs and user portals.

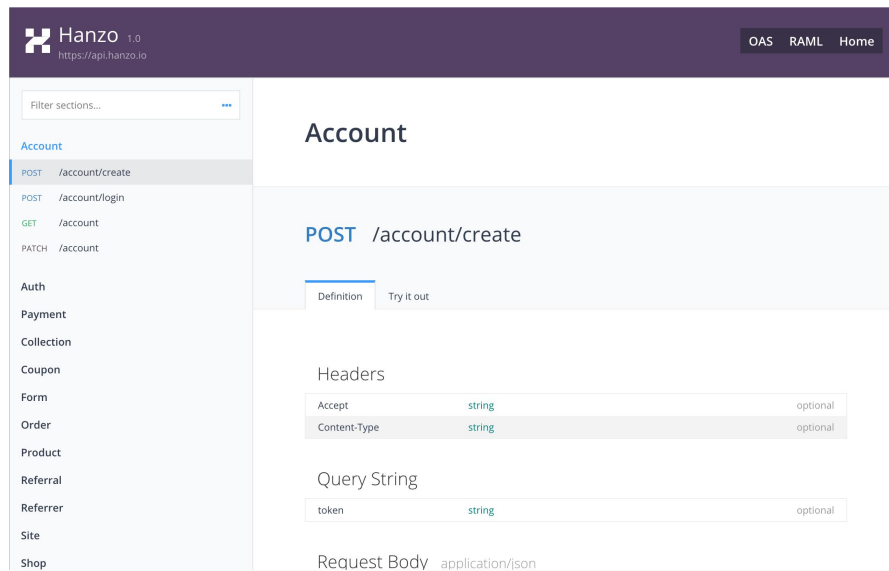

Checkout.js, a drop-in checkout experience that we've heavily optimized for product launches and crowdfunding.

Batteries included

Hanzo has an API for **just about everything**:

- Analytics and advertising
- Forms and data collection
- Account creation and user management
- Payment processing and pre-orders
- Order management
- Inventory management
- Shipping and fulfillment
- Coupons and promotions
- Ambassador and referral programs

Our APIs are orthogonal and can be mixed and matched as easily as our dashboard modules. We add new features on a weekly basis.

First-party integrations

Hanzo includes many high-quality, first-party integrations. All of our integrations are well maintained, tested and secure.

We're deeply integrated with the third-party services and platforms real companies need.

We believe so strongly in Hanzo that we use it to launch **our own companies**.

Full-stack ecommerce

Hanzo can take companies from **pre-launch** to **pre-order** to **fulfillment**. We launched **Stoned Audio** late last year and within **60 days** and **with only \$20k** we acquired:

- **1.2k customers, \$135k sales**
- **70k+ social users** with great engagement
- **1.5k signups** via our referral program
- **100 ambassadors** for our ambassador program

...and **delivered our first hardware product.**

Stoned Audio was born out of a desire to make wireless earbuds that don't compromise on sound quality.

Launching our own hardware company has **honed our focus**. This experience **informs everything we do**.

Nothing is faster

We were able to capture early-adopter interest from day one and **deliver in months, not years.**

October	2016	Public launch, first user signs up
November	2016	Batch 1 opens, first order accepted
December	2016	1k customers acquired by mid-month
January	2017	Batch 2 opens, first orders delivered
February	2017	Customer returns first product
March	2017	Next product launch cycle begins

This is **hardware at the speed of software.**

Hanzo enabled us to compete with much larger, more established brands and capture a significant amount of interest in only months.

Business model, today

We collect **5% of all sales** made through our platform and directly manage advertising and marketing for most of our customers.

- Every launch we've managed has grossed **over \$100k in the first month**
- This is sustainable; many customers reach over **\$1m a month in revenue**
- The average length of time a company works with us is **18 months**
- Nearly every customer we work with elects to pay for our **design, engineering, and marketing**

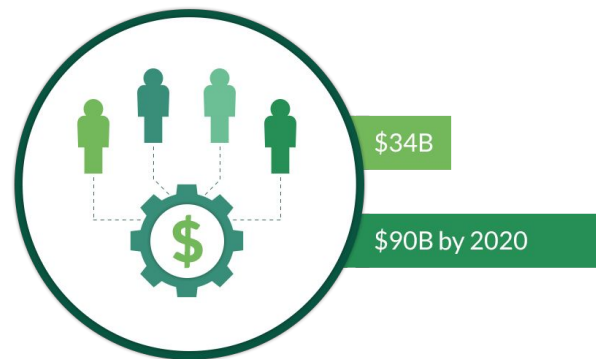

Business model, soon

Launching self-service is our next move.

Long-term, our integrated platform will allow us to sell a **variety of packages**.

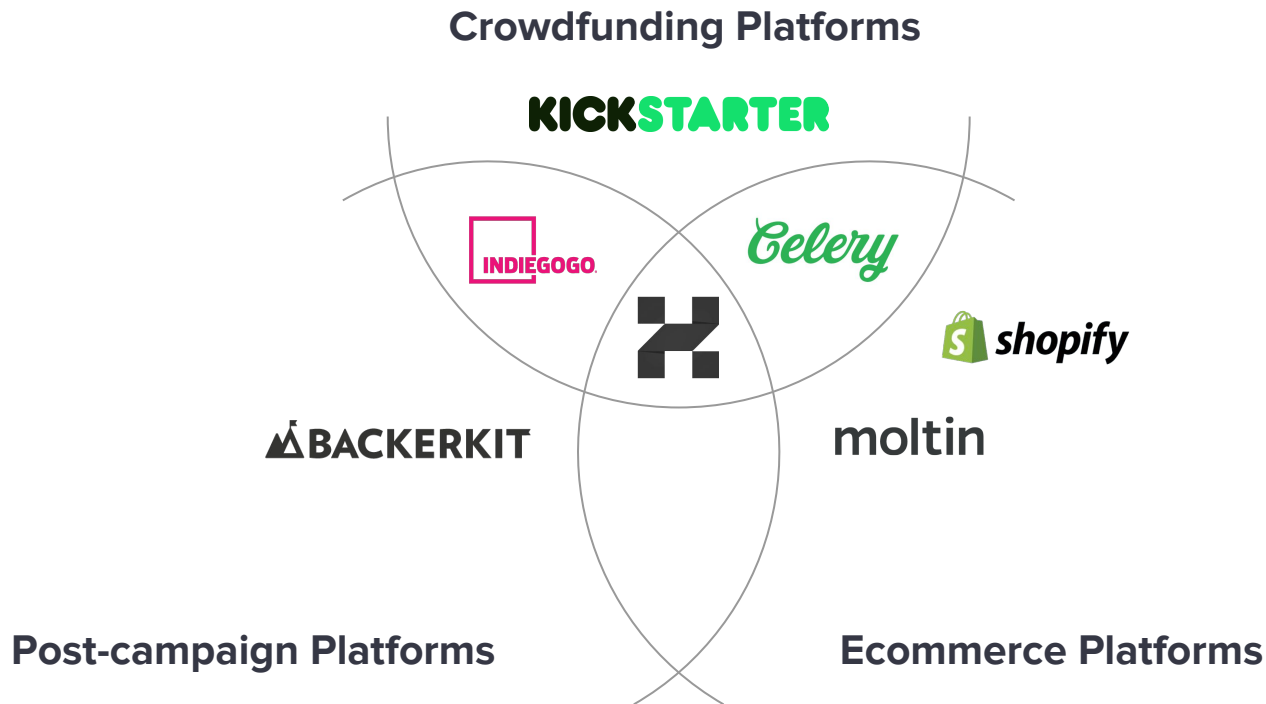

- All self-service plans will include **recurring fees**
- Many of our existing APIs will become paid, with **granular pricing** based on usage
- We will continue to **eat our way up the stack**, developing features that **solve valuable problems**
- We will expand our managed offering by partnering with **elite hardware and startup accelerators**

The market for crowdfunding alone is huge: despite its limitations, **in 2015 over \$34 billion was raised** by early adopters.

And it's growing: The World Bank estimates that the crowdfunding market will reach **\$90 billion by 2020**.

Competition

Next up

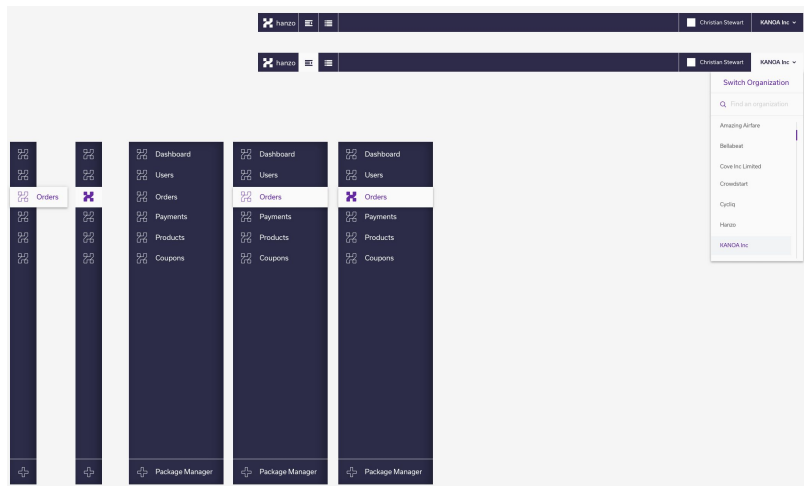

We want to **make Hanzo smarter** and
launch self-service in a public beta.

Dash 2.0

We've learned a lot since we began work on Hanzo over two years ago. With Dash 2.0, **we're shooting for the stars.**

We've open-sourced **Daisho**, a library for building modular dashboards. Thanks to this, our new dash will even be **extensible by customers.**

And by popular request, completely themeable :)

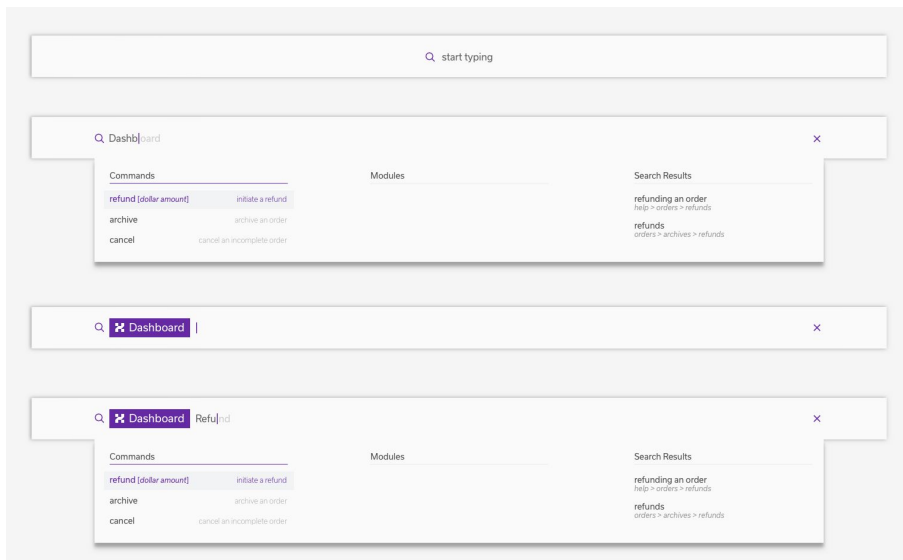

Our new dashboard will enable businesses to build out infrastructure even more rapidly and with even greater customization than before.

Command Bar

Introducing: **Command Bar**, our innovative solution for navigation, performing business tasks and business intelligence.

With it, customers will be able to **rapidly navigate** Hanzo, **automate repetitive tasks** and quickly **answer questions**.

Customers will even be able to add **new commands and functionality** to Hanzo, no UI designer required.

With the Command Bar, the full power of Hanzo is literally at your fingertips. With our extensible API, it can even get smarter.

Expansion Plan

We require **\$1m USD** to prepare for public launch, build our community and make Hanzo accessible to a larger audience.

In 2017, we will:

- Open signups for our **public beta** and capture developer attention
- Acquire our first **1000 customers** and collect valuable data
- **Expand integrations** as necessary based on demand
- **Build community** around our ecosystem and tools
- Launch **Dash 2.0** and introduce **Command Bar**
- **Automate advertising and marketing** with user-friendly UI
- **Partner with hardware and startup accelerators** to drive deal flow

Thank you!
