

hanzo

Cutting-edge **business platform**

Building a business is **hard**.

Launching a new business demands the mastery of **dozens of services and tools** and the development of time-consuming **customizations and integrations**.

Yet without **solid fundamentals**, no business can succeed.

Launching a product is **hard**.

Products require **significant capital** to develop and **real traction** to achieve profitability.

Existing platforms are **inflexible** and narrowly focused. If your **lack of traction** doesn't kill you, **technical debt** will.

Hanzo **solves** these problems.

Meet Hanzo.

The screenshot displays the Hanzo dashboard interface. On the left is a dark sidebar with navigation links: Home, Dashboard, Users, Orders, Payments, Products, Coupons, Ships, Forms, Subscribers, Profile, API, Organization, and Integrations. The main content area is titled 'Order / qn022pw12ndGm0r0a0' and features a 'Shipping Address' form with fields for Recipient Name, Via Number, Street Address, Apartment Number, City, State, Postal/ZIP Code, and Country. A map of Kansas City is shown next to the form. Below the form is a 'Shipping' table with columns for Estimated ID, Carrier, Service, Shipping Cost, Submitted On, Processed On, Expected On, Latest Update, and Tracking Number. To the right of the form is a 'Statistics' section with fields for ID, Number, Created, and Last Updated. Below that is a 'Status' section with dropdown menus for Status, Payment Status, and Fulfillment Status. Further down is a 'Coupons' section with a link to 'FREE10KINDS'. At the bottom right is a 'Buyer Information' section with fields for ID, Email, First Name, Last Name, Phone, and a 'Send Confirmation' button.

First Scanned On	Delivered On	Summary
Thursday, 02 February 2017	Monday, 06 February 2017	Delivered

Our dashboard is made of *modular* components which can be mixed-and-matched as needed to support business requirements.

Hanzo comes **out of the box** with everything needed to **validate ideas**, **collect pre-orders**, **manage customer relationships** and **grow companies**.

And as you grow your business, Hanzo **grows with you**.

Mission

Allow founders to focus on **products** rather than **infrastructure**.

Our story

We've **raised \$15m in pre-orders, sales and subscriptions** for early-stage hardware and software startups using Hanzo. Along the way we've developed unique solutions for crowdfunding, ecommerce, token sales and more.

We've **collected \$1.2m** in fees and contracts from startups which have used and loved our platform.

We **invested it** developing our IP.

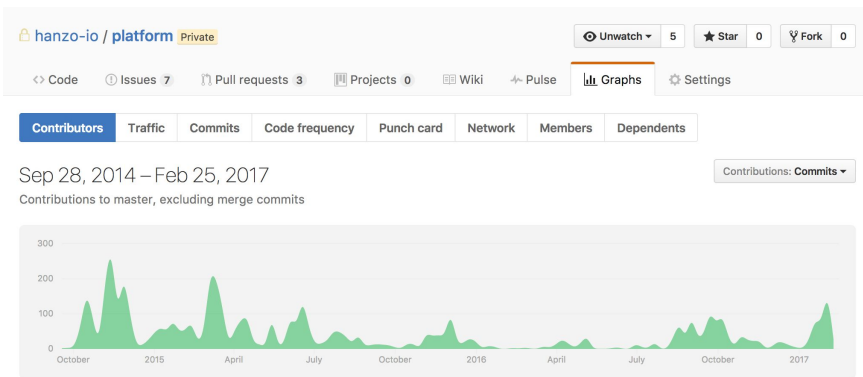

Team

Zach Kelling	CEO
Michael Walker	VP Growth
Tim Messer	VP Operations
David Tai	VP Engineering
Imran Hameed	VP Research

Collectively, we've built software which has been used by **millions of people**. We have experience **building and scaling platforms**; we've built advertising, banking, blockchain, crowdfunding, ecommerce, and marketing platforms, and high-performance, real-time systems.

Together, **we've learned the hard way** what it takes to be successful in both **hardware** and **software**. Hanzo is the sum of our experience.

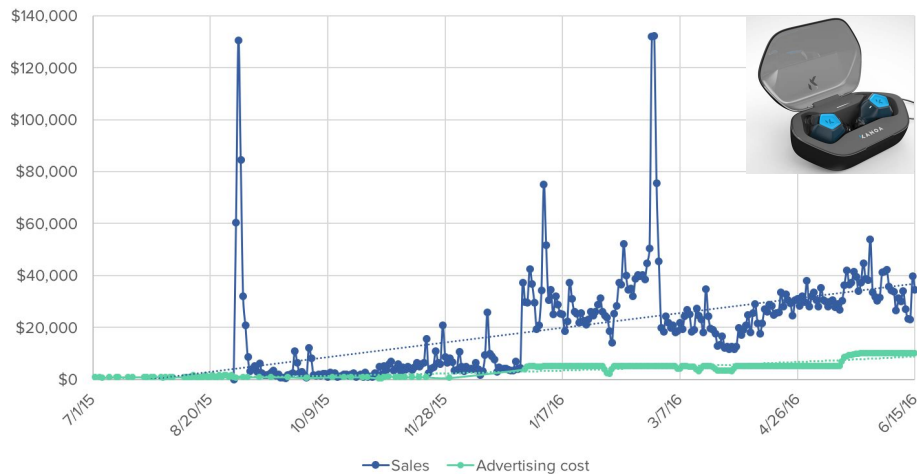

Early adopters

Hanzo is **battle-hardened**. From day one we've worked with other startups to guide and shape Hanzo.

We launched **SKULLY's AR-1** in August 2014, raising **\$2.5m on Indiegogo** and **\$3.3m on Hanzo**. Our Indiegogo campaign became the **fastest to reach \$1m** and is still one of the highest funded of all time.

We launched **KANOA** in September 2015. We collected **50k pre-orders**, growing revenue to **\$1.5m per month**.

We launched **UnikoinGold** in June 2017. We've already collected **hundreds of emails** and **thousands of slack users** and we expect their token sale to be exceptionally successful.

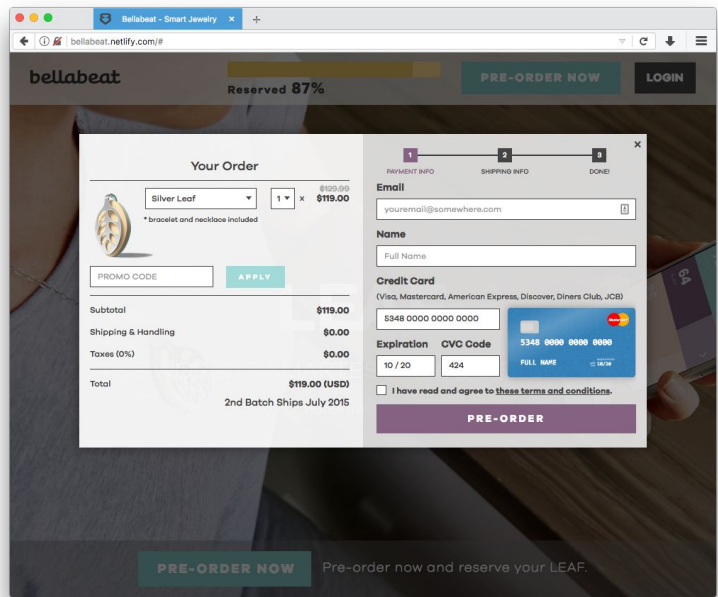

We found early success during our private beta with hardware companies. Our flexibility and unique features are able to unlock unparalleled growth.

Developer friendly

Early-adopters love our **developer-centric platform**. With a single line of code, founders have access to a beautiful, secure, and integrated ecommerce platform.

We've **open sourced 25 ecommerce libraries** which enable beautiful and customizable shopping experiences.

Shop.js, our **reactive UI library**, powers everything from payments to referral programs to user portals.

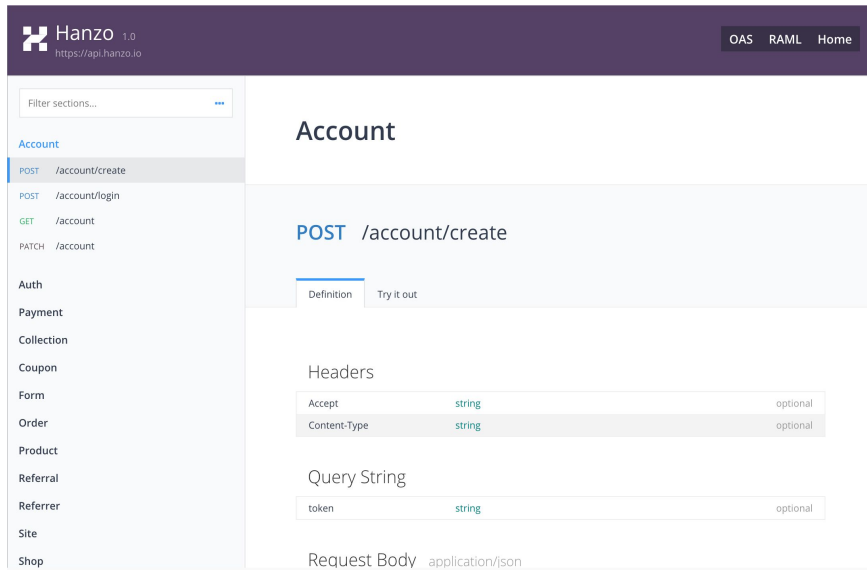

Checkout.js, a drop-in checkout experience that we've heavily optimized for crowdfunding and product launches.

Batteries included

Hanzo has an API for **just about everything**, including:

- Advertising and marketing automation
- Ambassador programs
- Authentication and user signup
- Cryptocurrencies, digital wallets
- Coupons and promotions
- Forms and mailing lists
- Fulfillment and shipping
- Inventory management
- Payment processing, pre-orders and token sales
- Product collections and search
- Referral programs and reviews
- Site hosting with CDN
- User and order management
- Webhooks for custom integrations

Our APIs are orthogonal and can be mixed and matched as easily as our dashboard modules. Enabling an API unlocks new functionality in Hanzo.

Powerful integrations

Hanzo includes many high-quality, third-party integrations. Our integrations are well maintained, tested and secure.

We're **deeply integrated** with the third-party services and platforms real companies need.

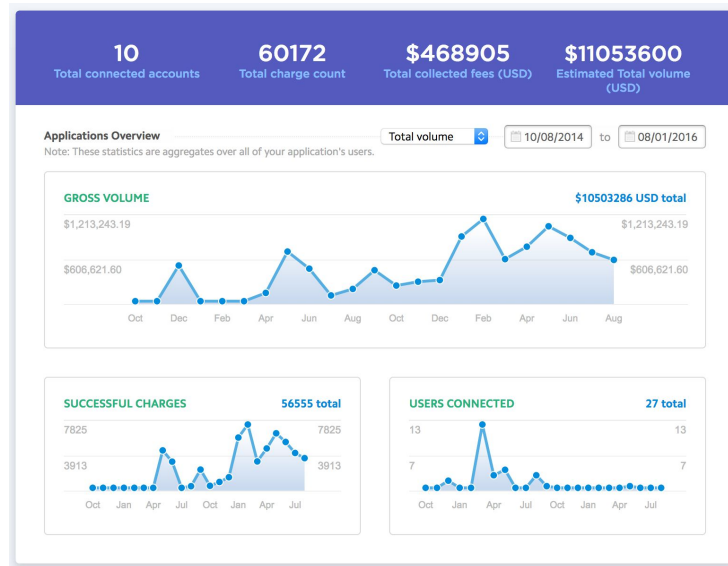

If Hanzo can't do what you need, one of our third-party integrations can.

Business model, today

We collect **5% of sales** made through our platform and directly manage advertising and marketing for most of our customers.

- Every launch we've managed has grossed over **\$100k in the first month**
- This is sustainable; many customers reach over **\$1m a month in revenue**
- The average length of time a company works with us is **18 months**
- Nearly every customer we work with elects to pay for our **design, engineering, and marketing**

We've collected **\$500k in fees** on **\$11m in volume** with [Stripe Connect](#).

Business model, soon

Launching self-service is our next move.

Long-term, our integrated platform will allow us to sell a **variety of packages**.

- All self-service plans will include **recurring fees**
- Many of our existing APIs will become paid, with **granular pricing** based on usage
- We will continue to **eat our way up the stack**, developing features that **solve valuable problems**
- We will expand our managed offering by partnering with **elite hardware and startup accelerators**

Even without considering the broader ecommerce market, our potential in crowdfunding is huge: despite its limitations, **in 2015 over \$34 billion was raised** by early adopters.

And it's growing: The World Bank estimates that the crowdfunding market will reach **\$90 billion by 2020**.

Competition

Next up

We want to **make Hanzo smarter** and **launch a token sale** after a public beta.

Expansion Plan

We require **\$2m USD** to make Hanzo smarter and more accessible and prepare for our public beta and token sale.

In 2017, we will:

- Make **cryptocurrencies a first class citizen** on our platform
- Support **unique token sale campaigns**
- Open signups for our **public beta** and capture developer attention
- **Expand integrations** as necessary based on demand
- **Build community** around our ecosystem and tools
- **Automate advertising and marketing** with user-friendly UI
- **Partner with hardware and startup accelerators** to drive deal flow

Thank you
