

hanzo

Cutting-edge **business platform**

Building a business is **hard**.

Launching a new business demands the mastery of **dozens of services and tools** and the development of time-consuming **customizations and integrations**.

Yet without **solid fundamentals**, no business can succeed.

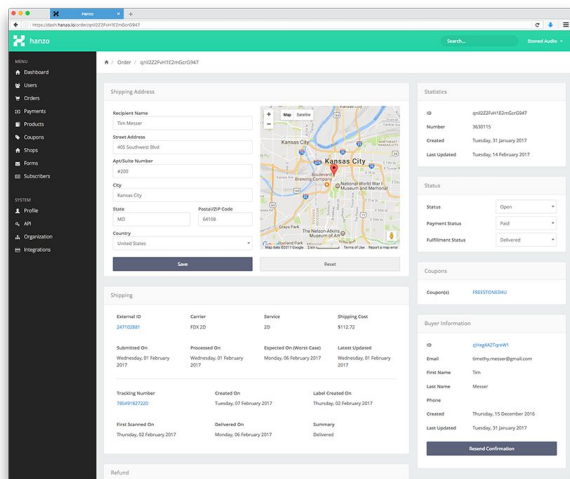

Launching a product is **hard**.

Products require **significant capital** to develop and **real traction** to achieve profitability.

Existing platforms are **inflexible** and narrowly focused. If your **lack of traction** doesn't kill you, **technical debt** will.

Hanzo **solves** these problems.

Meet Hanzo.

Our dashboard is made of *modular* components which can be mixed-and-matched as needed to support business requirements.

Hanzo comes **out of the box** with everything needed to **validate ideas**, **collect pre-orders**, **launch token sales**, **manage customer relationships** and **grow companies**.

And as you grow your business, Hanzo **grows with you**.

Mission

Allow founders to focus on **products** rather than **infrastructure**.

Our story

We've **raised \$15m in pre-orders, sales and subscriptions** for early-stage hardware and software startups using Hanzo. Along the way we've developed unique solutions for crowdfunding, ecommerce, token sales and more.

We've **collected \$1.3m** in fees and contracts from startups which have used and loved our platform.

We've **invested in ourselves** and have spent **3 years developing our IP**.

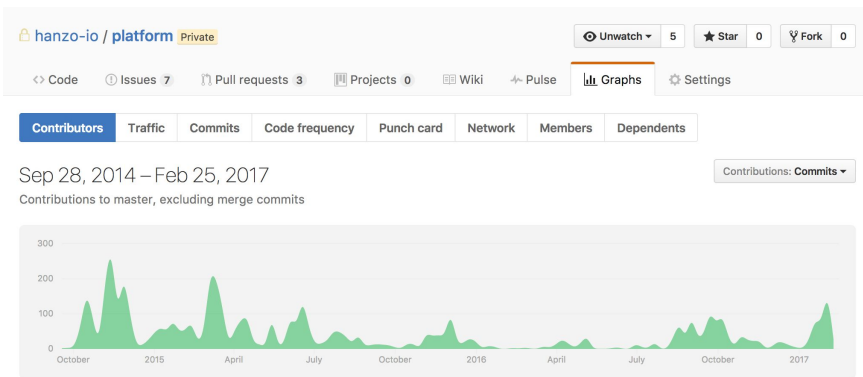

Team

Zach Kelling	CEO
Michael Walker	VP Growth
Tim Messer	VP Operations
David Tai	VP Engineering
Imran Hameed	VP Research

Collectively, we've built software which has been used by **millions of people**. We have experience **building and scaling platforms**; we've built advertising, banking, blockchain, crowdfunding, ecommerce, and marketing platforms, and high-performance, real-time systems.

Together, **we've learned the hard way** what it takes to be successful in both **hardware** and **software**. Hanzo is the sum of our experience.

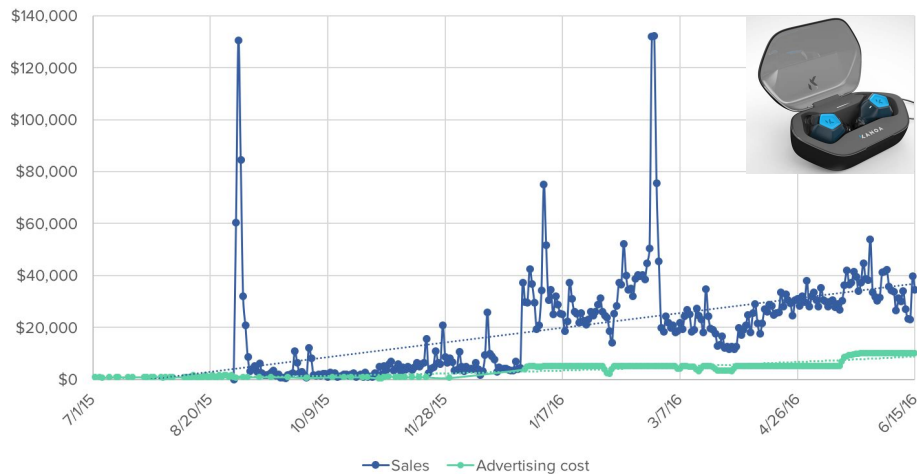

Early adopters

Hanzo is **battle-hardened**. From day one we've worked with other startups to guide and shape Hanzo.

We launched **SKULLY's AR-1** in August 2014, raising **\$2.5m on Indiegogo** and **\$3.3m on Hanzo**. Our Indiegogo campaign became the **fastest to reach \$1m** and is still one of the highest funded of all time.

We launched **KANOA** in September 2015. We collected **50k pre-orders**, growing revenue to **\$1.5m per month**.

We launched **UnikoinGold** in June 2017. We've already collected interest from **thousands of users** and expect the token sale to be exceptionally successful.

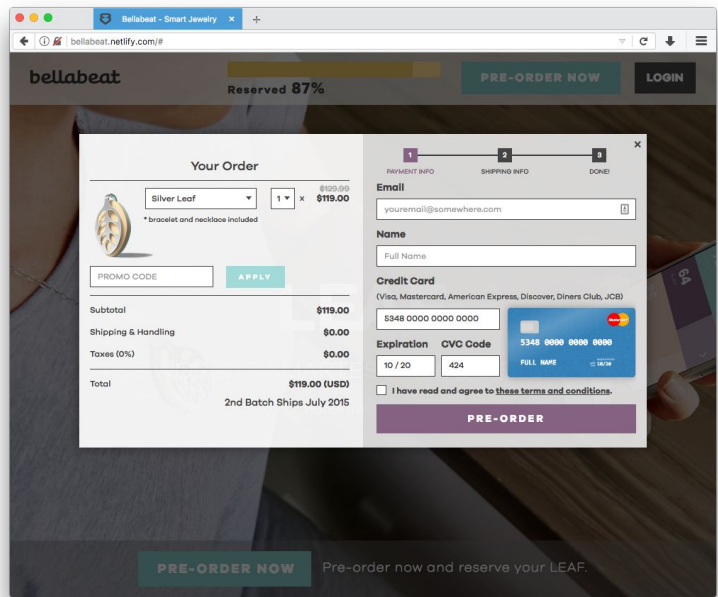

We found early success during our private beta with hardware companies. Our flexibility and unique features unlock unparalleled growth.

Developer friendly

Early-adopters love our **developer-centric platform**. With a single line of code, founders have access to a beautiful, secure, and integrated ecommerce platform.

We've **open sourced 25 ecommerce libraries** which enable beautiful and customizable shopping experiences.

Shop.js, our **reactive UI library**, powers everything from payments to referral programs to user portals.

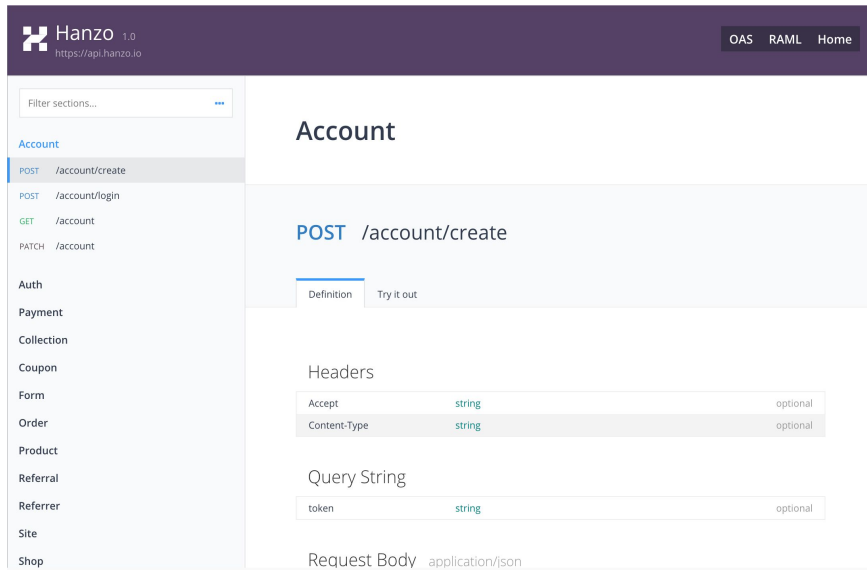

Checkout.js, a drop-in checkout experience that we've heavily optimized for crowdfunding and product launches.

Batteries included

Hanzo has an API for **just about everything**, including:

- Advertising and marketing automation
- Ambassador programs
- Authentication and user signup
- Cryptocurrencies, digital wallets
- Coupons and promotions
- Forms and mailing lists
- Fulfillment and shipping
- Inventory management
- Payment processing, pre-orders and token sales
- Product collections and search
- Referral programs and reviews
- Site hosting with CDN
- User and order management
- Webhooks for custom integrations

Our APIs are orthogonal and can be mixed and matched as easily as our dashboard modules. Enabling an API unlocks new functionality in Hanzo.

Powerful integrations

Hanzo includes many high-quality, third-party integrations. Our integrations are well maintained, tested and secure.

We're **deeply integrated** with the third-party services and platforms real companies need.

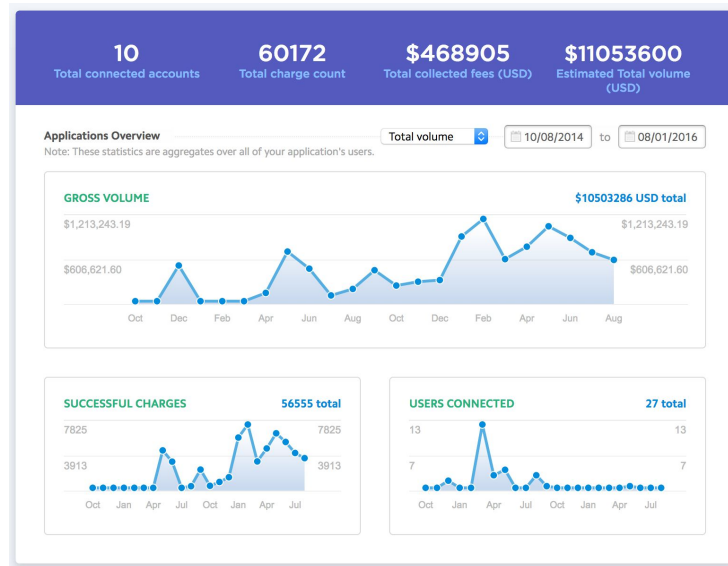

If Hanzo can't do what you need, one of our third-party integrations can.

Business model, today

We collect **5% of sales** made through our platform and directly manage advertising and marketing for most of our customers.

- Every launch we've managed has grossed over **\$100k in the first month**
- This is sustainable; many customers reach over **\$1m a month in revenue**
- The average length of time a company works with us is **18 months**
- Nearly every customer we work with elects to pay for our **design, engineering, and marketing**

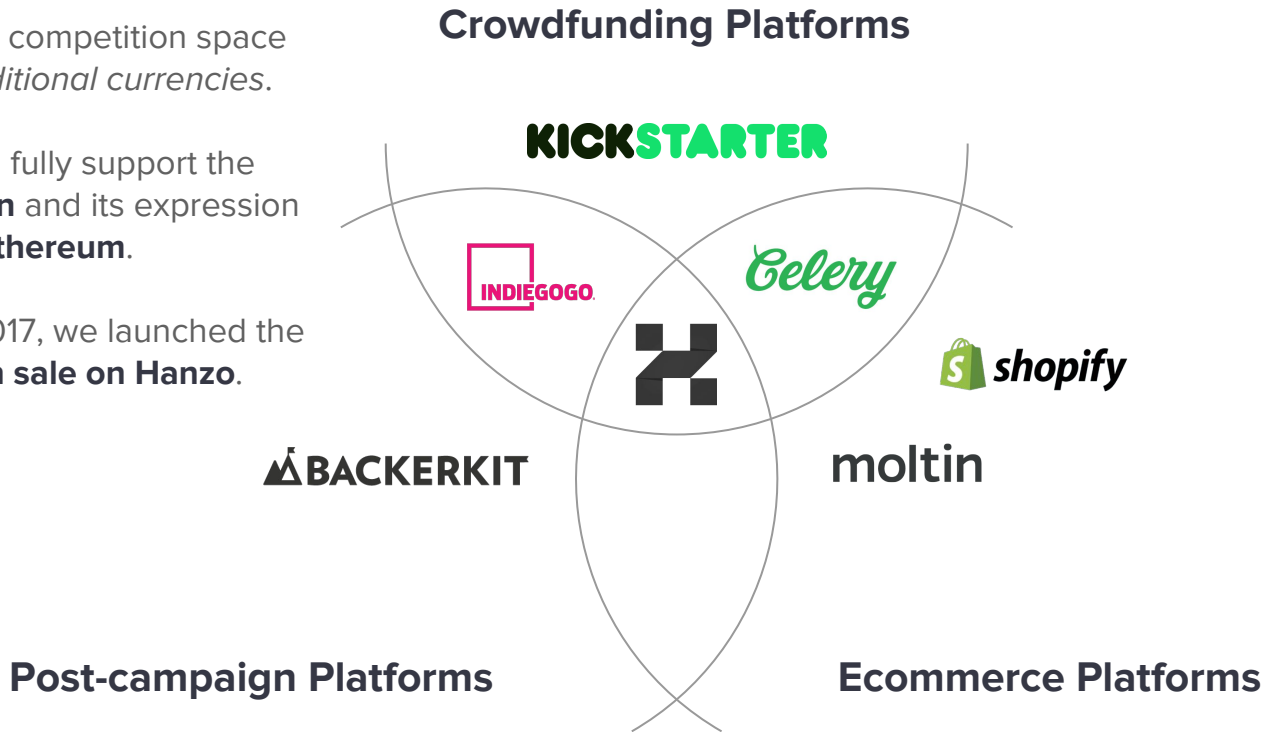

We've collected **\$500k in fees** on **\$11m in volume** with [Stripe Connect](#).

Competition

This is the competition space just in *traditional currencies*.

Hanzo will fully support the **blockchain** and its expression through **Ethereum**.

In June 2017, we launched the **first token sale on Hanzo**.

Next up

We want to **make Hanzo smarter** and **launch a token sale** after a public beta.

Expansion Plan

We plan to make Hanzo smarter and more accessible and prepare for our public beta and token sale.

In 2017, we will:

- Launch the **Hanzo token sale** to fund future development
- Add **first-class support for cryptocurrencies** and **blockchain**
- Open signups for our **public beta** and capture developer attention
- **Automate advertising and marketing** with user-friendly UI
- **Partner with hardware and startup accelerators** to drive deal flow
- **Build community** around our ecosystem and tools

Thank you
